Status: Final

PCR

TEST	RESULT	FLAG	REFERENCE	UNIT
SARS-nCoV-19 RT-PCR	Detected			

For patient information on what to do should you test positive for coronavirus (SARS-CoV-2) please go to: COVID-19 advice <https://www.nicd.ac.za/diseases-a-z-index/covid-19/>

SARS Coronavirus 2 RNA was detected in this sample. Please correlate this result with the clinical presentation and contact the virologist on call if you wish to discuss the result. COVID-19 is a notifiable disease and will be reported appropriately by BioSmart to the NICD.

As PCR assays may remain positive after the period of infectivity, repeat PCR testing is not required after an isolation period of approximately 10 days.

In patients previously infected with SARS-CoV-2, the PCR test may yield positive results for prolonged periods which is indicative of remnant RNA rather than infectious virus.

In this scenario, if the PCR test is repeated in quick succession, these repeat tests may yield positive or negative results. Re-infection has been reported, and should be considered in cases where a subsequent PCR is positive 3 months after the initial diagnosis. Interpret in conjunction with clinical features and previous laboratory results.

Authorised: FAMOROTI (Pathologist)

Dr Famoroti (MP 0645141 - Molecular Pathologist/Virologist) is responsible for this report and is available for consultation if required: pathologist@biosmart.com
